

Progress Report

Date of Meeting : 26/06/2023

Learned :

1. Basics of dart and flutter framework
2. Creating a homepage, top card, loading circle, plus button, transaction card
3. How to take expenses or income as input with the plus button
4. Backend and database using Google sheets

Project Progress : Developed basic expense tracker app using flutter framework; where input is taken using a plus button and the transaction is saved in the google sheets which acts as a database here.

Next : Adding calendar and showing the transaction made in a particular month

Date of meeting :

Learned :

1. Adding calendar to take input
2. Showing the date and time of the transaction using calendar

Project Progress : Now, the app shows the date and time of the transaction. The date is saved in the backend(Gsheets). It uses an extra column in the google sheets to save the date.
